

DEBASIS TRIPATHY
Sr. Software Engineer
tripathy.debasis.us@gmail.com
+1 (469)-518-9693

PROFESSIONAL SUMMARY:

Around 6+ years of experience in **Javascript / NodeJS, Java, TypeScript, Software Engineering, SDLC Life Cycle, Object Oriented programming**, distributed systems, and testing of **Client/Server, Enterprise, and Web Applications** using apache spark, spark streaming, apache kafka and cloud technologies.

- Developed custom components, templates, and workflows with strong background in apache spark, kafka, java, python, SQL, No-SQL, AWS, Docker, CI/CD and microservices.
- Designed and implemented RESTful APIs using NestJS for seamless integration with external partners and clients.
- Experience in messaging queue services like Rabbit MQ, AWS SQS, ECS, EKS and Apache Kafka.
- Developed Insurance APIs and integrated them on RIVO platform client partners
- Experienced in designing event-driven architectures, troubleshooting production issues.
- Hands on experience with spark streaming pipelines consuming real-time events from kafka and persisting processed streaming data to distributed storage.
- Proficient in Responsive Design Layout applications using SCSS, supporting multitude of browsers and devices.
- Experience in developing PL/SQL, Stored Procedures, functions, triggers using Oracle and comfortable working with databases like SQL Server, Cassandra, DB2, No-SQL and MySQL.
- Experienced in RDBMS Design, DB normalization, ER modelling, SQL, PostgreSQL, procedures, cursors, functions, triggers, and good Understanding in creating SQL and HQL Queries in Oracle, MySQL, DB2.
- Handled clients and partners for distributed and localized APIs services for Qoala. Also worked on AWS bedrock to integrate multiple AI-agents for internal applications for the team such as slack, confluence and jira etc.
- Experience in using Continuous delivery / Continuous Integration (CI/CD) tools Docker, Jenkins to deploy this application to AWS and used GIT for Version Control of code for incremental development.

TECHNICAL SKILLS:

Programming	NodeJs, NestJS, Java(JDK), PL/SQL, TypeScript
JavaScript Technologies	JUnit, J2EE, EJB, JSF, Servlets, JSP, JDBC

	JavaBeans
Scripting	JavaScript, Java, Shell Script, TypeScript, Python
Frameworks	NodeJS, Spring (MVC, ORM, Web Service), Hibernate, React , ReactJS, NestJs, NextJs, Typescript,
IDE	Eclipse, IntelliJ, Visual Studio
Web Technologies	ReactJS, Angular, CSS, AJAX, REST
Testing Tools	Selenium, Postman, Visual Studio Coded UI Junit, Soap UI
Databases	MySQL, Psql, MongoDB
Database Tools	SQL
Cloud	AWS, S3, EC2, S3, RDS, API Gateway, Elastic Load Balancer, ElasticSearch, Bedrock
Build Tools	Gradle, Maven
Other Tools	JIRA, Confluence
Version Control	Git, SVN, CVS, VSS (Visual Source Safe)
Operating Systems	MacOS, Linux, Unix

PROFESSIONAL EXPERIENCE:

MUFG (Client) , NJ

Software Engineer

June 2026- present

Responsibilities:

- Designed and developed event-driven workflows in Javascript, enabling asynchronous communication and real-time data processing across distributed systems.
- Designed and developed **Java/Spring Boot microservices** for enterprise financial applications, exposing scalable **REST APIs** and integrating backend services with databases, Kafka-based event streams, and external systems.
- Designed and implemented reusable Angular 21 standalone components, reactive forms, role-based dashboards, and real-time data interfaces, integrating with Kafka-driven event streams, AWS cloud services, and microservice architectures to support high-volume business operations.
- Optimized application performance using OnPush Change Detection, Lazy Loading, Code Splitting, and Bundle Optimization, while implementing OAuth 2.0/JWT authentication, secure API communication, and enterprise security best practices.
- Collaborated with cross-functional Agile teams to build cloud-native solutions using Angular 21, NestJS, AWS, MongoDB/SQL Server, GraphQL, Docker, Kubernetes, and CI/CD pipelines, ensuring high availability, scalability, code quality, and seamless production deployments.
- Designed and integrated Java/Spring-based payment microservices using the Saga pattern and event-driven messaging, implementing compensating transactions for payment failures and refunds while maintaining transactional consistency and end-to-end reconciliation.
- Implemented AI/GenAI-powered features by integrating OpenAI/Claude APIs, developing RAG pipelines, prompt engineering, semantic search, vector embeddings, and AI-assisted workflow automation for intelligent content generation and decision support. Orcestrated the AI deployment and multiple agentic AI integration with the application
- Developed, enhanced, and maintained enterprise applications using Java, supporting scalable business systems and collaborating with cross-functional technology teams throughout the SDLC.
- Performed system analysis, debugging, and performance troubleshooting to identify application bottlenecks, resolve production issues, and improve overall system reliability.
- Utilized AI-assisted development tools such as GitHub Copilot and code-generation platforms to improve developer productivity, accelerate coding tasks, and enhance code quality.

Albertsons, Plano, TX

Software Engineer

Sept 2025 – May 2026

Responsibilities:

- Hands on Experience in working with Databases MYSQL, SQL-Server, DB2 and NoSQL MongoDB,
- Cassandra, Dynamo DB, Couch DB and Graph DB.

- Working with Rational Team Concert (RTC), Jenkins, Git, GitLab, and GraphQL, JavaScript, worked with Kafka, React/Redux.
- Developed real-time data processing pipelines using apache spark streaming, scala and kafka, consuming high volume event streams from kafka topics and processing streaming data for downstream applications
- Using Kotlin for implementing new modules in the application. Built and maintained RESTful APIs to support event-based integrations and internal platform features.
- Developed and deployed AWS Lambda functions to trigger events, automate backend processes, and enhance microservice communication.
- Utilized AWS services including DynamoDB, EC2, S3, SNS/SQS, and API Gateway for scalable, serverless and compute-based solutions.
- Conducted integration testing across multiple environments (Alpha, Gamma, Production) to ensure stable
- Developed spark structured streaming applications using DataFrames and spark SQL to consume the kafka events, perform transformations and aggregations and processed data to distributed storage.

Hexaware, India (client)

Software Engineer

Jan 2023-Nov 2024

Responsibilities:

- Involved in requirement gathering and requirements analysis and participated in client meetings.
- Troubleshoot applications to identify bottlenecks and bugs and devised solutions to migrate and address issues.
- Worked extensively on developing controllers, Interfaces and implementation classes using Spring MVC framework & used Microservice architecture with Spring Boot based service through REST.
- Experience in Micro services development using spring boot and deployment in Pivotal Cloud Foundry (PCF)
- Used **MongoDB**, Cosmos DB, **AWS SQL**, **MySQL**, Oracle, and Redshift for distributed data management.
- Maintained **CI/CD** pipelines with **Jenkins + Kubernetes**, improving deployment speed by 40%.
- Deployed containerized **microservices** using **Docker**, Helm Charts, and managed clusters in Azure across different applications.
- Monitored applications using Grafana, Adobe Analytics, and custom dashboards for campaign tracking .
- Implemented different kinds of caching strategies like Java in-memory cache(Guava, Caffeine), Redis Cache for distributed storage, and in Python using Redis and in-memory LRU cache to improve performance, reduce latency, and handle high-throughput read operations efficiently.
- Implemented reusable backend components and REST APIs using **Java**, **Spring Boot**, **Hibernate**, **SQL**, and **microservice architecture**, supporting enterprise-scale applications and integrations.
- Implemented REST APIs with Elasticsearch for high-speed querying and search features.
- Built modular and reusable components using React (Hooks + Functional Components) with TypeScript, ReactJS, NextJS
- Integrated Spark processing workflows with **AWS-based data platforms and relational/distributed data stores**, supporting scalable data ingestion and transformation pipelines. Styled UIs using CSS Modules/Bootstrap, created reusable Button/Card/Form components.
- Managed application state with React Context API and Redux Toolkit, ensuring predictable data flow.
- Implemented React Router v6 for client-side routing, lazy loading, and protected routes.
- Built controlled forms with Formik and Yup validation, providing real-time error feedback.
- Designed responsive and accessible UIs using Bootstrap, following WCAG accessibility guidelines.
- Optimized performance through code splitting, memoization (React.memo/useMemo/useCallback), and virtualized lists.
- Implemented authentication and authorization using JWT tokens, route guards, and role-based rendering.
- Wrote unit and integration tests using Jest and React Testing Library to ensure UI reliability and code coverage.
- Participated in QA automation using Postman, JUnit, Mockito and performed unit & integration testing.

Environment: JavaScript, Hibernate, ReactJs, Angular, Redis, NodeJS, JSP, JMS, Jenkins, Agile, JIRA, Azure cloud, Maven, AWS.

Lloyds Banking Group,India (Client)**Software Engineer****August 2020 – Dec 2022****Responsibilities:**

- Used REST Client and PostMan to test the rest-based services and used JUnit and Mockito to test the middleware services.
- Created Hibernate mapping files, sessions, transactions, Query and Criteria to fetch the data from SQL based schema.
- Developed backend services supporting **payment initiation, transaction validation, transaction-status processing, and downstream financial-system integration.**
- Implemented transaction validation and business-rule processing to ensure that financial requests were correctly validated before being persisted or forwarded to downstream services
- Supported reconciliation and transaction-status workflows by validating application records against downstream processing results and investigating transaction discrepancies.
- Proficient in configuring Hibernate properties and annotations for entity mapping.
- Worked with Angular2 to generate various components, routes, services, and pipes and structured the application code.
- Using Kotlin for implementing new modules in the application.

Environment: Javascript, NodeJS, Java, Spring, Spring Boot, Hibernate, SQL, MongoDB, RESTful Web Service, ReactJS, jQuery, Angular LS, Angular 21,.

Lloyds Banking Group,India (Client)**Software Engineer Intern****Sept 2019 – July 2020****Responsibilities:**

- Created custom authentication and authorization mechanisms within Apigee using Java-based scripting for fine-grained access control.
- Proficient in creating RESTful APIs using Spring Boot, including controller Mapping, request/response handling.
- Developed various screens for the front end using ReactJS and used various predefined components from NPM (Node Package Manager). Used Node Cron package to schedule periodically executable jobs.
- Used various core concepts such as Multi-Threading, Exception Handling, Collection APIs to implement various features.
- Implemented react-admin framework in reactJS for admin panel to monitor revenue, bug report, customer issues

EDUCATION DETAILS:**Rutgers Business School, NB/NWK****Jan 2025 – May 2026****Masters in Information Technology and Analytics****Biju Patnaik University of Technology****July 2016–August 2020****Electrical and Computer Engineering**
