

DEBASIS TRIPATHY

Harrison, NJ — debasis.tripathy@rutgers.edu
+1(862)-215-4840 — [LinkedIn](#) — [Portfolio](#)

SUMMARY

Software Engineer with 3+ years of experience building scalable and operating production data pipelines and backend systems. Strong focus on data reliability, distributed systems, and cloud-native infrastructure supporting 200K+ users.

SKILLS & CERTIFICATIONS

Technical: JavaScript, Python, TypeScript, Java, React.js, Node.js, NestJS, MongoDB, PostgreSQL, SQL, Spring Boot, AWS (certified), UiPath, AI, RAG

EXPERIENCE

Rutgers Business School

Course Assistant

Jan 2025 – Present

Sept 2025 – Present

- Finance data modelling, synthetic data creation using ledger, tax documents, UiPath automation to verify documents with 3 way match process using data snipper.

Integra Micro Software Services

Software Engineer

Bangalore, India

Nov 2023 – Nov 2024

- Designed Kafka-based event streaming pipelines with idempotent producers and consumers to prevent duplicate and lost financial events; improved end-to-end processing latency and system reliability by **3-4%** and improved system reliability under peak transactional load.
- Built and maintained CDC-based data pipelines with schema evolution handling; implemented Redis high-availability and optimized MongoDB sharding and indexing to support high-throughput transactional workloads by increasing efficiency.
- Enhanced model performance and system throughput from **94%** to **96%** in production.
- Improved deployment cycle times by **6%** using automated CI/CD (GitHub, Jenkins, Docker).
- Created automated reconciliation processes to cross-verify transactional records and downstream aggregations, identifying inconsistencies and ensuring financial data accuracy across these systems.
- Architected secure SFTP-based data delivery pipelines to generate and transmit system-produced tax and compliance files, conforming to external specifications (ONDC protocols) and time-bound settlement requirements (2–4 business days).

Antino Labs Pvt Ltd

Software Engineer

Bangalore, India

2023 – 2024

- Designed and deployed AWS Lambda layers for resizing uploaded documents for 2M+ users. Developed HCL healthcare complete backend architecture and managed a team of 8 developers.
- Engineered end-to-end order lifecycle functionality including creation, rescheduling, cancellation, and confirmation with role-based access control for admin, supervisor, and agent users.

PROJECTS

[PRORESUME \(proresume.us\)](https://proresume.us)

- Designed and deployed full-stack architecture using React.js, Node.js, Express.js, and MongoDB with CI/CD pipelines (Docker, Nginx, Jenkins).
- Integrated agentic AI systems with ETL pipelines and Retrieval-Augmented Generation (RAG) to generate personalized career documents and guidance.
- Scaled platform to handle real-time user traffic while ensuring responsive & secure authentication (OAuth 2.0, Passport.js).

[GLOBALNEUROLAB \(globalneurolab.com\)](https://globalneurolab.com)

- Built monitoring and visualization tools for EEG data, integrating cloud storage (AWS S3), Kinesis, Glue and streaming pipelines using webSockets.
- Researched and deployed hybrid LLM + ML + ETL frameworks to support medical research queries with multimodal data over 5,000 samples in a 19-second window frame.

EDUCATION

Rutgers, The State University of New Jersey

Rutgers Business School, Newark, NJ — Master of Information Technology and Analytics

May 2026

Relevant Coursework: Data Structures, Big Data Mining, Cloud-computing, Business Forecasting, AI / ML, SAP/ERP
